DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

2. Claims 1-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Boetje et al (US 6,289,167).

Regarding claim 1: Boetje teaches an image recording and reproducing device (fig. 2) comprising: record processing means (DVCR, column 5, lines 20-25) for recording image data (audio/video data, fig. 1) on a first recording area of a recording medium (108, column 3, lines 55-65) and recording specific information (computer generated scoreboard, column 9, lines 1-20) on a second recording area (data base 106, fig. 1, column 8, lines 63-64, column 11, lines 8-15) of the recording medium; (fig. 1) reproduction processing means (DVCR, column 9, lines 10-20) for reproducing the first and second recording areas; (DVCR is for recording data onto recording area of a tape, column 2, lines 35-40) and means (server, column 9, lines 45-65) for converting the reproduced specific information to electric information, (server generated scoreboard, column 9, lines 54-55, a server is a computer, and a computer generates electric signals/ voltage, current)

Art Unit: 2624

which is difficult to recognize, (computer generated electric signal is difficult recognized without an electric sensor) so that the electric information (server generated scoreboard, column 9, lines 54-55) is selectively combined (if desired, column 9, lines 50-55, concatenated, column 9, lines 50-60) with the image data (video clips, column 9, lines 54-55).

Regarding claim 2: Boetje teaches multiplexing means (the function of the server that is performing the intercutting, column 9, lines 50-55, column 8, lines 1-15) for multiplexing the converted electric information, (scoreboard, column 9, lines 54-55) which is difficult to recognize, (computer generated electric signal is difficult recognized without an electric sensor) and the reproduced image data, (video clips, column 9, lines 54-55) to output; and selecting means (assembly/edit process of the server, column 9, lines 45-50) for selecting the multiplexed data obtained from the multiplexing means or the reproduced image data to output. (Column 9, lines 45-65)

Regarding claim 3: Boetje teaches generating means (computer, column 9, lines 9-11) for generating the specific information (scoreboard, column 9, lines 54-55).

Regarding claim 4: Boetje teaches wherein the first recording area is provided on a first recording medium (videotapes, column 9, lines 30-35) and the second recording area is provided on a second recording medium. (Tapes, column 11, lines 9-15)

Regarding claims 5-8: Claims 5-8 are method steps for the apparatus discussed in claims 1-4. Please see claims 1-4.

Art Unit: 2624

Regarding claims 9-12: Boetje teaches a memory medium (video server, column 6, lines 55-60) readable with computer (column 6, line 64) used for carrying out the processing by the apparatus discussed in claims 1-4. Please see claims 1-4.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

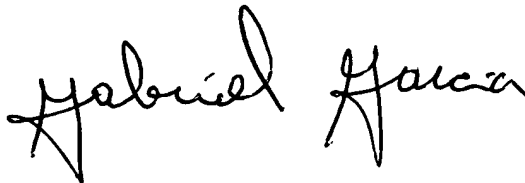

Inoue et al. (US 6,226,449) teaches apparatus for recording and reproducing image data on two different area of a recording medium.

Ryan et al. (US 6,374,036) teaches video recording using watermark.

Moskowitz et al. (US 5,889,868) teaches using watermarking in digital data.
